Download **ABLE TO USE APP** from App Store or Google Play
Remote gate automation management with Smartphone

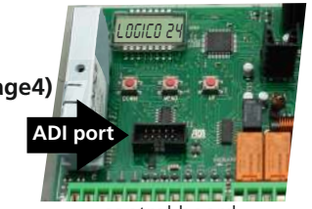

INSTALLATION

1. Disconnect the power supply to the control unit
2. Insert the module into the ADI port of the control unit
3. At the first installation, make sure that the module is in access point mode (RED LED ON STEADY)
4. Then proceed to enroll the control panel to the server following the instructions provided by the **able. to use** APP **(Page4)**

NOTE: If the module is not in access point mode, reset the module using the reset procedure: press the reset button for 3 seconds, the LED must go out and light up again, remaining steady red

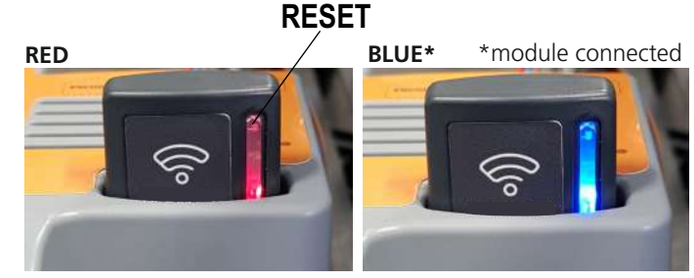

control board

control board

STATUS OF LED

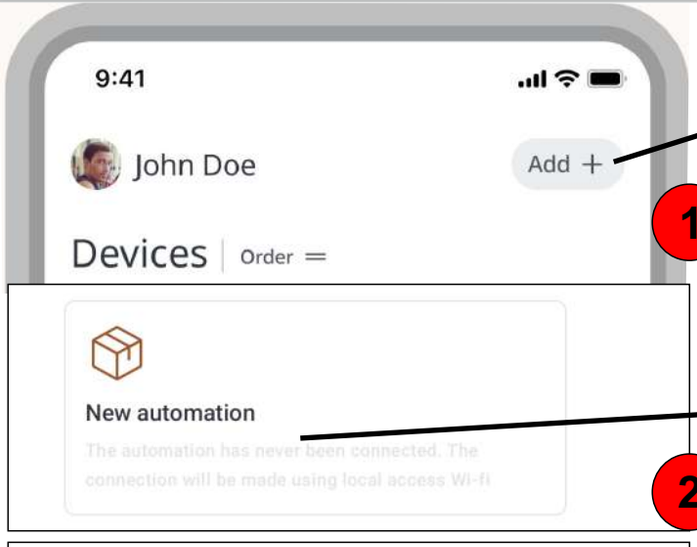

- **FIXED RED:** The module is in Access Point mode, waiting for a connection
- **FLASHING RED**: mismatch between the serial of the control panel and the serial stored in the module. Perform the module reset procedure
- **FIXED BLUE**: STA mode, module connected to the server

Real Time Gate Status

APC-able.INFINITY-2.0
WiFi Module

Remotely manage the automation: you can control the gate, garage, rolling shutters and lights even when you are not at home.

Geolocation: you can decide to receive a notification when you approach the chosen automation or automatically activate it when you are getting close to it (automatic mode).

Remotely check the status of your automation (Did I close my gate, or did I leave it open?) **and the latest movements** (when was the last time it was opened?)

Permissions: grant other users the use of one or more of your automation, but only in the time slot you decide.

Brings together all the home control automation in a single device: lights, garage, gate, rolling shutters and curtains.

Set new scenarios according to your needs, choosing for each one whether to activate it manually or automatically at a specific time/day

APC-able.INFINITY-2.0
WiFi Module

FULL REMOTE CONTROL OF THE AUTOMATION

- Opening
- Closing
- Stopping
- Managing outputs
- GEO-Location management of the automation
- Knowing the status of the automation (opened ,closed , % opened, stopped)

FULL ACCESS CONTROL FEATURES

- Defining the users that can have access to the site
- Limiting user access in time (hour, day, week and month)
- Log and record every access of each user
- Adding/Blocking/Deleting users

AUTOMATIC SETUP OF SCENARIOS

- Opening and closing with scenarios
- Each scenario can be performed under a timing (specific hours of the day, daily, monthly, specific day of the year)
- Managing multiple automations with one single command / scenario
